

Diversifying Innovation

# OUR DIGITAL BUSINESS OPERATIONS

## Application Service

To be the disruptor and not the disrupted, you need to put innovation at the heart of your applications, but finding a practical path to doing so is far from straightforward. For most companies, complex application landscapes—with a mix of legacy systems, digital and SaaS—consume too large a share of IT resources and restrict their ability to drive digital growth.

## Artificial Intelligence

To take advantage of AI, you have to move beyond proof of concept. Find out how to scale the impact of AI across your business for maximum value. Artificial Intelligence (AI) is a constellation of technologies that allows machines to sense, comprehend, act and learn in order to extend human capabilities. In fact, our clients see the greatest gains when humans and machines work together to complement each other's strengths.

## Data and Analytics Services

Chances are, your business is storing loads of dark data—unused information from transactions, connected devices and other sources. And if you're already using automation and AI technologies, you're likely creating more "data exhaust" than ever. How many opportunities are hidden there? Imagine a steady stream of insights to fuel intelligent technologies; 360-degree customer views to boost relevance and revenue; or faster, smarter decisions to accelerate innovation. Analytics can do that for you.

## Cloud Services

Speed, cost, and innovation – Accenture Cloud First makes cloud's promise real. We harness

the power of change to create new and extraordinary value by putting cloud at the core of your business. Our approach puts your business needs first, creating industry-specific solutions to get you moved to—and benefiting from—the cloud now.

## Managed Services

We take on the 360-degree responsibility of the entire IT operations including 24X7 monitoring, IT support on demand as well as problem resolution. We are best at assuming the responsibility of providing the services to our clients and strategic IT decisions are implemented proactively and are communicated to our clients. Some of the products that we consult are Microsoft, Google Analytics, AWS, SAP, CRM, Salesforce.

## Supply Chain and Operations

We help organizations reimagine and transform their supply chains for tomorrow—with a positive impact on the business, on society and on the planet.

Supply chains today are under pressure like never before. They need to meet more complex demands from customers and the business. They need to adapt to the global disruption caused by COVID-19. And they need to be responsible and responsive to outmanoeuvre uncertainty in a world that brings fresh challenges and opportunities every day.

## Technology Consulting

Raise your business to the next level with ground breaking strategy, fresh technologies and innovation advisors that help drive business value.

Technology will never stop evolving, it's the nature of the beast. So, having an innovation advisor on your side is vital: to tailor a strategy that fits, and to uncover the right tech for your toughest business problems—no matter the industry.
